

DATA SHEET LABORATORY

Geotechnical and Materials Testing

Harrison Group Environmental Limited runs an in-house soils and materials testing laboratory which offers a comprehensive range of testing services.

The laboratory is based in Norwich and the premises is currently undergoing expansion, doubling it's size. This will enable it to expand and develop the programme of testing services. In addition to this the laboratory is working towards UKAS accreditation, which should be achieved in Spring 2007.

The range of services includes:

- Classification tests
- Compaction test
- Strength tests
- Root identification
- Materials Testing
- Site quality control testing

The laboratory test equipment utilises the latest technology and is calibrated in accordance with the requirements of the relevant standards. Electronic data logging in conjunction with computerised analysis are an

important part of the service that is offered in order to optimise accuracy. As a result of it's operation through the Harrison Group, clients' needs are made a priority and turnaround times for testing and issuing results are kept to a minimum.
